

CHRONIC CARE MANAGEMENT CONSENT

Patients with chronic conditions enroll in CCM (Chronic Care Management) and remote connected device programs to provide more comprehensive care and anticipate deterioration. You can stop at any time, but it has been shown to be beneficial in preventing complications. A plan of care is created and available for your review. The care plan includes the patient's list of problems, expected outcome, treatment goals, symptom management, planned interventions, medication management, social services if requested, and periodic review of the care plan. We try to answer any questions you may have about your insurance company; however, you may need to contact your insurance company for additional information. If your insurance changes, it is your responsibility to provide updated information to our office. By signing you are in agreement for our staff to reach you and discuss chronic conditions and plan of care.
